

# Intro to our RI3D (Robot in 3 Days) Team

## Team Ontario

### About RI3D:

Robot in 3 Days (RI3D) is a program meant to first but not foremost entertain and secondly, to inspire and spark ideas. RI3D is a great way to start teams off during the first week of Robot Build Season. Particularly for low resource teams, RI3D allows them to consider different prototypes that they would otherwise not have been able to build. Our RI3D Team will be doing the same but with a slight twist. First, the robot will be on display for teams to examine and learn from. Secondly, if rules permit, the robot will be used as a substitute in the event that a team does not have a robot to compete with (either due to being lost during shipment or other circumstances). RI3D is a great resource for many teams. Many of the members on our team have benefited greatly from learning what other RI3D have had to offer in previous years.

### Mentors and Qualifications:

A majority of our RI3D members will be well-seasoned FIRST Robotics Alumni; many of them currently pursuing post secondary studies. Acceptance into the team is by competitive application. Therefore, the most experienced and well qualified applicants will be accepted. For each area of the robot (mechanical, electrical, programming, etc.), there will be members that are very well experienced in the use of different machinery, safety protocols and tools usage. Many of our members are currently mentoring FRC teams. As well, there will be an appropriate number of first aid qualified members.
